3. 标准节

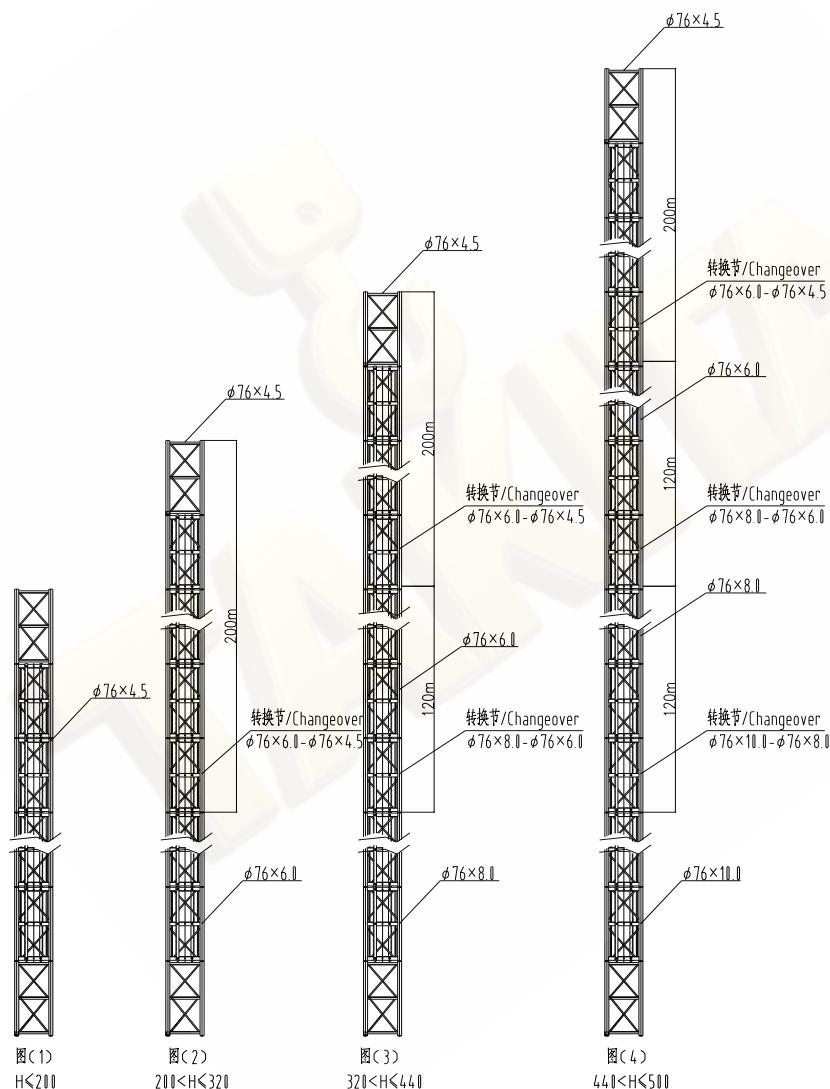

3. Mast

3.1 标准节配置

3.1 Configuration of Mast

升降机安装高度不同，标准节的配置也不同，标准节主弦管壁厚随着安装高度的增加而配置不同，在不同主弦管壁厚的标准节之间必须设置转换节。

For different installed height of hoist, the configuration of mast sections is also different. The thickness of main chord of mast section will vary as the installed height increases, and the changeover section shall be set up between the mast sections with different thickness of main chord.

注：H为导轨架安装高度

Note: H is the installed height of mast

标准节规格选择示例：

Example for selection of specification of mast section:

导轨架的安装高度为500m时，根据标准节立管壁厚配置图3.1，可知：

When the installed height of mast is 500m, the thickness of mast section is indicated in Figure 2.1-3:

4. SC 系列施工升降机附墙架的选型

4. Selection of Mast tie for SC Industrial Hoist

目前SC系列施工升降机附墙架标配型号为IID型，以下型号附墙架为选配，如以下型号附墙架不满足使用要求，可根据用户要求及实际使用工况另行设计附墙架。

At present, the standard type of mast tie for SC series construction hoist is IID, and the others types are optional types. If these types of mast tie cannot be satisfied with the user's requirement, we can design new type according to the actual working condition and the user's requirement.
